

## Attachment C

### Energy Conservation on Computers Initiative

November 15, 2001

- Information and support Web pages have been developed:  
<http://www.colostate.edu/Services/ACNS/energysavings.html>
  - These pages include memo to DDDs, background information on energy savings and specific instructions for configuring Energy Star settings for all flavors of Windows and Macintosh.
  - Windows NT has no support for Energy Star settings through the "Control Panel." Since the only alternative is doing power management through BIOS settings (which can have a negative impact on other applications), we have advised against this. Thus, no savings for Windows NT workstations.
- Reporting Web pages and database structure have been developed:  
<http://niwot.colostate.edu/cwis292/energy/energy.cfm>
- Meeting held November 14, 2001 with UITSS and selected IT staff to instruct them on the process and reporting.
- Completion date is January 11, 2002 to allow IT staff time to update machines over Thanksgiving and/or semester break.
